

# Meeting Agenda

Date: 2015-03-31

Facilitator: Oscar Evertsson

Participants: Mats Högberg, Oscar Evertsson, Filip Hallqvist, Jesper Jaxing

## Objectives

Unclear how to proceed with UML and which classes we have to make. Our knowledge of how a mail client works is limited, e.g. what protocols to use and how to communicate with mail servers. We didn't know how many use cases we needed, so we sent a mail to our mentor.

## Reports

We have been working together with the RAD and the use cases. As of right now we have a use case model, and we have started to work on the RAD and almost finished with the preliminary RAD.

## Discussion items

### Domain model

There is a preliminary model. The model needs work, e.g. should the top-level class have an inbox and outbox or should all accounts have an inbox and outbox each? We think the later option is the best.

### RAD

We need more nouns to create our UML.

## Outcomes and assignments

We have sent an email to our mentor asking about how the domain model is supposed to be written. We will continue to work on the RAD, and aim to be done with the RAD by thursday to be able to start coding immediately.

## Wrap up

### Unsolved issues

How the domain model is supposed to be written.

### Next meeting

Thursday 2/4 9.00-10.00 in EDIT-5205.
